DIGITIZER DATA

A digitizer data file is comprised of one or more "PARTs". Each part consists of a HEADER record followed by DATA records.

A header record contains statistical information about the digitizer data (see "Description of the header record"). A data record contains the actual digitized data in inches.

All records are 2048 bytes long and consist of VAX/VMS 32 bit floating point data. The first 256 data values are the X-coordinates and the last 256 data values are the corresponding Y-coordinates.

```

:      Y-coordinates        :
:                           : >
 ___________________________
```

Throughout a digitizer data file are the following codes:

X	Y	Description	Action to be taken
-32761	---	"Bad point"	Ignore this single point
-32762	Elevation	"Start Contour"	Begin a contour line of the given elevation
-32762	-32762	"Save"	Continue processing
-32763	---	"Skip"	Ignore the data following a "Skip" until reach any other valid code
-32764	1.0 or 2.0	"Header"	This is a header record
-32766	---	"End of part"	Next record should be a header, unless this is the last part.
-32767	---	"End of data"	Stop processing - no more valid data.

Note: 1) The header code appears only at point #1 of a header record.

2) Each contour starts with X(i) = -32762 and Y(i) = Z value of that contour. The (X,Y) values for this contour follow until the next code appears in X.

Description of the Header Record

Point #	X	Y	
1	-32764	1 or 2	1=Spherical, 2=Rectangular coordinate system digitizing was done in
2	NL	---	NL = XMAX - XMIN, in rectangular = 0, in spherical
3	NS	---	NS = YMAX - YMIN, in rectangular = 0, in spherical
4	X1	Y1	Coordinate of registration corner 1 (inches)
5	X2	Y2	Coordinate of registration corner 2 (inches)
6	X3	Y3	Coordinate of registration corner 3 (inches)
7	X4	Y4	Coordinate of registration corner 4 (inches)
8	XMIN	YMIN	Minimums for rectangular coordinates
9	XMAX	YMAX	Maximums for rectangular coordinates
10	----	----	
11	----	----	
12	LAT1	LON1	Lat and Lon of registration corner 1 in decimal degrees
13	LAT2	LON2	Lat and Lon of registration corner 2 in decimal degrees
14	LAT3	LON3	Lat and Lon of registration corner 3 in decimal degrees
15	LAT4	LON4	Lat and Lon of registration corner 4 in decimal degrees
16	RAD	ECC	Radius and Eccentricity of planet
17	PROJ	SCALE	Projection and map scale PROJ = 0, No projection PROJ = 1, MERCATOR PROJ = 2, LAMBERT PROJ = 3, POLAR PROJ = 4, TRANSVERSE MERCATOR
18	P1	P2	Standard Parallels of area digitized
19	CLAT	CLON	Center lat and lon of area digitized

*** The remaining points of the header record may be ignored ***

Note: Points 12 - 19 are used for spherical coordinates only.
