ISEE-1

MEPI/WAPS 3-D DIST.FUNC(36-S)

THIS DATA SET CONSISTS OF 10 8-MM TAPES. THE TAPES WERE CREATED ON A VAX SYSTEM AND WRITTEN IN VAX BACKUP FORMAT AND ARE ARCHIVED AS SUCH, THE TAPES ARE LABELED, WITH LABEL NAME OF "ISEE".THE D TAPES ARE IN A MIXED MODE DENSITY(WHICH IS HOW THEY WERE SENT TO US), THE C TAPES ARE HIGH DENSITY. EACH TAPE HAVE SEVERAL SAVESETS CONTAINED,WHICH ARE LISTED IN THE DATASET CATALOG. THE D AND C NUMBERS ALONG WITH THEIR TIMESPANS ARE BELOW.

TAPES D-88199,D-88200,D-88201,D-88204,D-88206, ALL HAVE
AN INCOMPLETE SAVE SET AT THE END. IT APPEARS THE BACKUPS WERE ALLOWED TO RUN UNTIL THE TAPE RAN OUT. IN EACH CASE, THE NEXT TAPE CONTAINS A COMPLETE COPY OF THAT SAVE SET. WHEN COPYING THESE TAPES, IT IS RECOMMENDED THAT ONLY THE INTACT SAVE SET BE COPIED.

OURCE_CHARACTERISTICS:

A. Description_of_Spacecraft:

The ISEE-1 spacecraft was one of three International Sun-Earth Explorer spacecraft, ISEE-1 and -3 built and run by NASA, ISEE-2 by ESA. ISEE-3 was launched in 1978 into a libration point halo orbit in the solar wind 240 Re upstream of earth. ISEE-1 and -2 were launched together on October 22, 1977 into nearly identical elliptical orbits of ~57 hours, apogee at ~23 Re, and the distance between ISEE-1 and -2 variable from ~100 km to several Re according to orbital position and the maneuverability of ISEE-2. The two spacecraft were instrumented with nearly identical complements of particles and fields experiments, designed to study magnetospheric boundaries. The spacecraft spin with a 3 second period, and their spin axis is aligned to within a few degrees of the negative Zgse axis.

B. Orbit_Information:

ISEE-1 and -2 were placed in highly elliptical (apogee ~23 Re, perigee ~several hundred km) orbits with a period of ~57 hours. ISEE-2 led ISEE-1 in orbit, and their separation was controlled by maneuvering ISEE-2 with on-board propulsion. The orbit was inclined 23 degrees to the geographic equator. The spacecraft re-entered the atmosphere in September, 1988.

C. Performance:

The ISEE-1 spacecraft performed normally from launch to re-entry.

TIME_SPAN_OF_THE_DATA: 10 November 1977 to 8 September, 1979
INVESTIGATION_OBJECTIVES: The MEPI was to measure the 3-d angular distribution f the flux of energetic ions (25 keV to 2 MeV) and electrons (22.5 keV to 1.2 MeV) throughout the ISEE-1 orbit. These data were to be used to investigate the physical mechanisms associated with acceleration, source and loss processes, and boundary and interface phenomena in the magnetosphere, magnetosheath, and solar wind. These phenomena include geomagnetic storms, substorms, other geomagnetic tail events, magnetopause shape and dynamics, magnetosheath flow, bowshock effects, and interplanetary and solar flare energetic particle behav-
